

gambit series EQI-DYN-LP

linear phase / dynamic dual seven band digital parametric equalizer, 24Bit/96kHz

The Weiss Gambit Series EQI-DYN-LP

Dynamic and Linear Phase EQ in a single unit

The EQI-DYN-LP contains both the Dynamic and the Linear Phase EQ programs. After power-up of the unit the user can choose between Dynamic (DYN) and Linear Phase (LP) modes. This allows to use a single unit for a wealth of different equalizing tasks.

The workspace storage, the snapshots and the snapshot backups are fully independent between the DYN and LP parts of the unit. This means that all setup data are retained in any case.

Current users of EQI-LP and EQI-DYN units can upload their current snapshot data into the EQI-DYN-LP via MIDI.

“I like the linear phase EQ a lot. It sounds much better and very natural. As for the Dynamic EQ - this is a killer for correcting mistakes. I found it great sounding for de-essing and de-booming mixes. Thanks again. Good choice.”
